

SMART CONTAINER LOGISTICS · DUBAI, U.A.E.

The end of the empty mile.

SWAP is a technology-driven platform that swaps empty import containers straight into export loads — taking control of allocation, scheduling, and last-mile execution in one digital workflow built for speed, accuracy, and zero wasted movement.

01 - COMPANY PROFILE

Building the mobility infrastructure of trade.

SWAP Connect Transport L.L.C is a Dubai-based logistics technology company, established in 2024 to transform how shipping containers move across inland, intra-country, and multimodal freight networks.

Through the SWAP digital platform we connect transport operators, freight forwarders, importers, exporters, shipping lines, and port stakeholders in one unified ecosystem — digitizing container transportation end to end.

Innovation

Sustainability

OUR MISSION

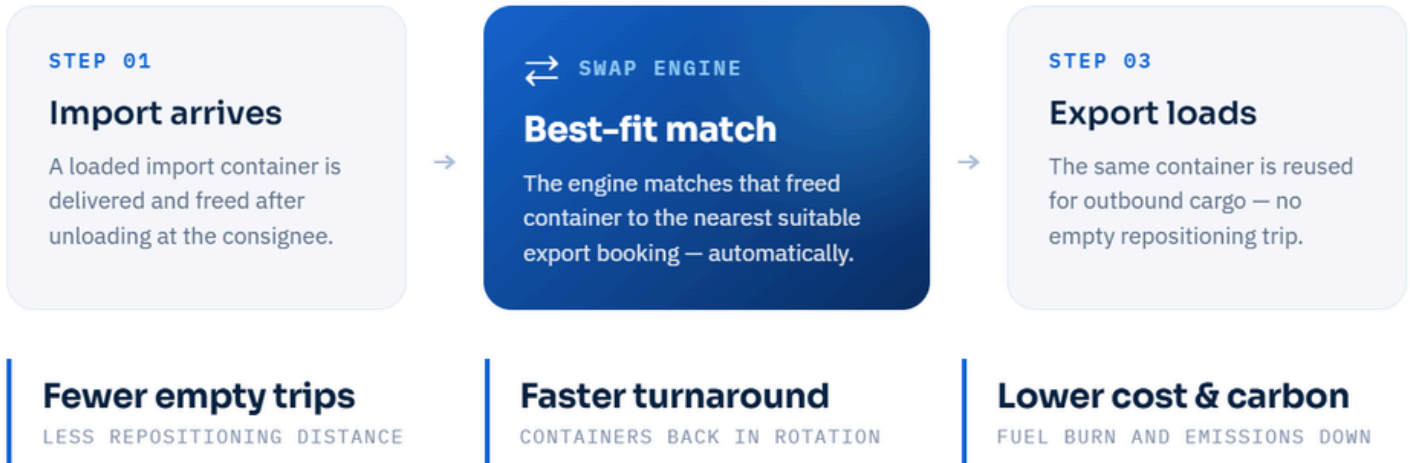

To reduce carbon footprint through sustainable transportation, and optimize vehicle utilization by minimizing unnecessary container movements and transit mileage.

OUR VISION

To deliver dependable, on-time, and cost-effective transportation by digitally connecting customers and transporters across the freight industry.

Import in. Export out. No empty miles.

Traditionally an import container is returned empty while an exporter waits for another. SWAP's matching engine pairs them automatically — the same container is swapped straight into an export load.

ENGINE · best-fit matching · live status (pending · approved · completed) · swap records with container IDs, timestamps & approvals

One platform. Eight integrated services.

01 Container Swapping Platform

Exchange import containers for export loading, cutting empty repositioning and lifting utilisation.

02 Freight Booking

Digital booking and trip management for efficient transportation planning and execution.

03 Fleet Management

Vehicle operations, driver assignments, trip execution and asset utilisation, centralised.

04 Real-Time Tracking

Monitor vehicles, containers and shipments across the full transportation lifecycle.

05 Route Optimization

Optimise routes to cut travel distance, fuel consumption and delivery delays.

06 Electronic Proof of Delivery

Paperless delivery confirmation and digital documentation management — ePOD.

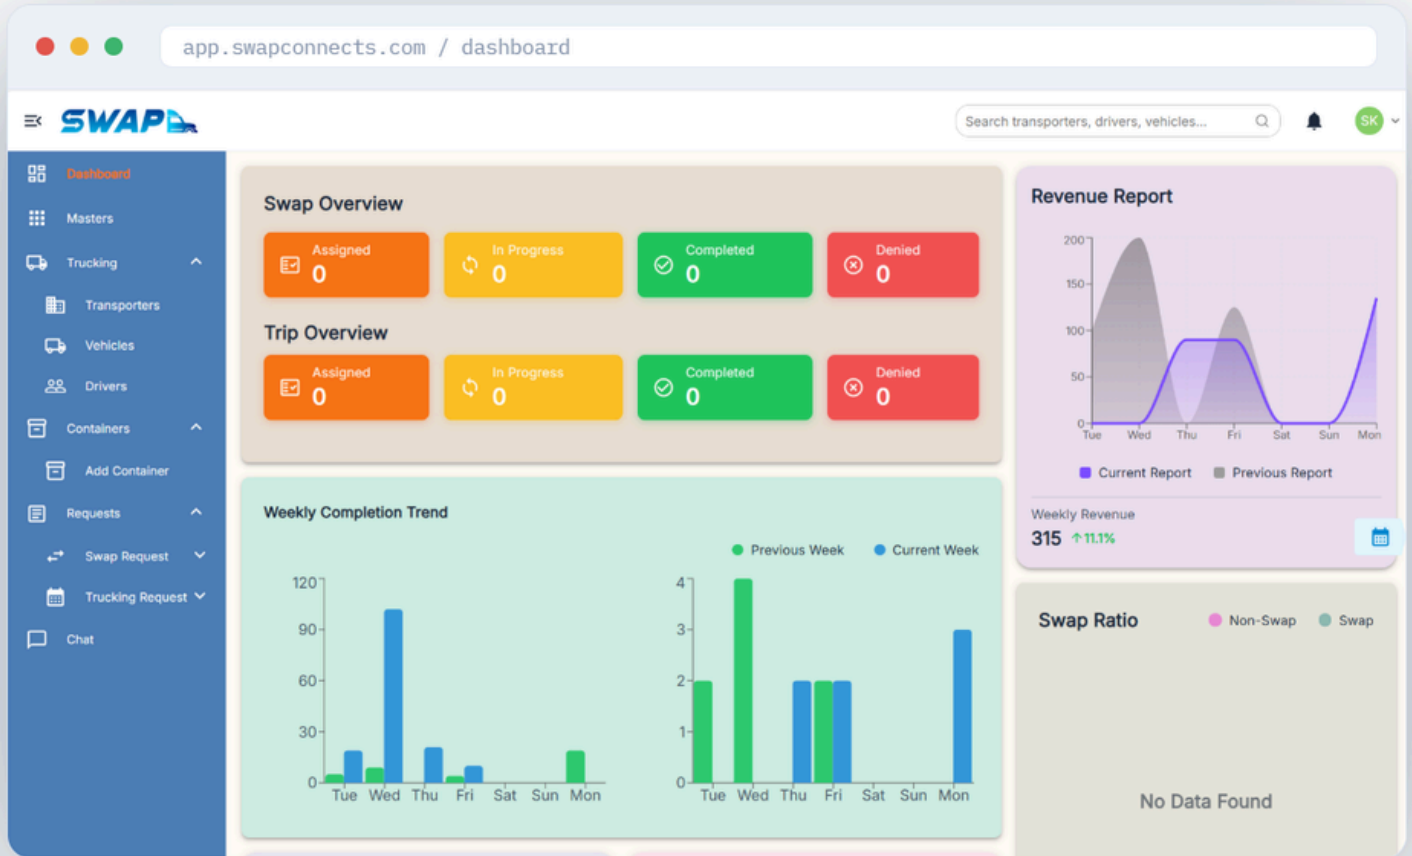

07 Supply Chain Visibility

Operational transparency with real-time status updates and performance monitoring.

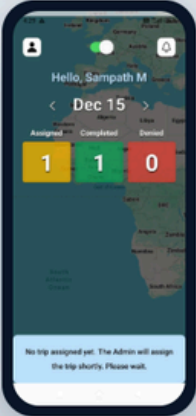

08 Business Intelligence & Analytics

Actionable operational insights and reporting for data-driven decision-making.

See every move, on every screen.

SWAP Admin – the web command center for transporters, vehicles, drivers, containers, trips and swap requests, with live dashboards, revenue reports and analytics.

MOBILE

SWAP Connect Driver App

OTP-secured login · online / offline status · trip assignments · map navigation · ePOD
Available in English, Arabic, Hindi & Urdu.

HARDWARE

SWAP KIT – Tablet + SIM

A pre-configured tablet and data SIM with the Driver app preloaded.

05 - ENVIRONMENTAL & COST IMPACT

Reduced fuel consumption

Intelligent matching and routing cut unnecessary kilometres.

Lower carbon emissions

Fewer empty and idle trips translate to a smaller footprint.

Eliminated paper workflows

Digital documentation improves compliance and traceability.

Maximised fleet utilisation

Better trip planning keeps vehicles productive, not idle.

Start moving containers more efficiently.
